Aqua-Quip EvoCR LED Pool Lights

The EvoCR Series LED Light has been developed for renovators of concrete pools. The Housing is supplied with a 20mm socket for connection to 20mm rigid PVC conduit. The housing has a narrow diameter of just 60mm and is inserted and sealed into a hole that is core-drilled through the pool wall.

The press-fit adaptor plate allows for angular and depth adjustment and simply glues into the housing after the pool interior surface has been applied. The low profile LED light is then connected to the waterproof plug kit on the cable and screwed onto the adaptor plate.

EVOCR LED LIGHT CODES	
CODE	DESCRIPTION
ASR 001	BLUE LED CR Light, 20m Cable
ASR 002	WHITE LED CR Light, 20m Cable
ASR 003	GREEN LED CR Light, 20m Cable
ASR 004	MULTI-COLOUR LED CR Light, 20m Cable

Profile:

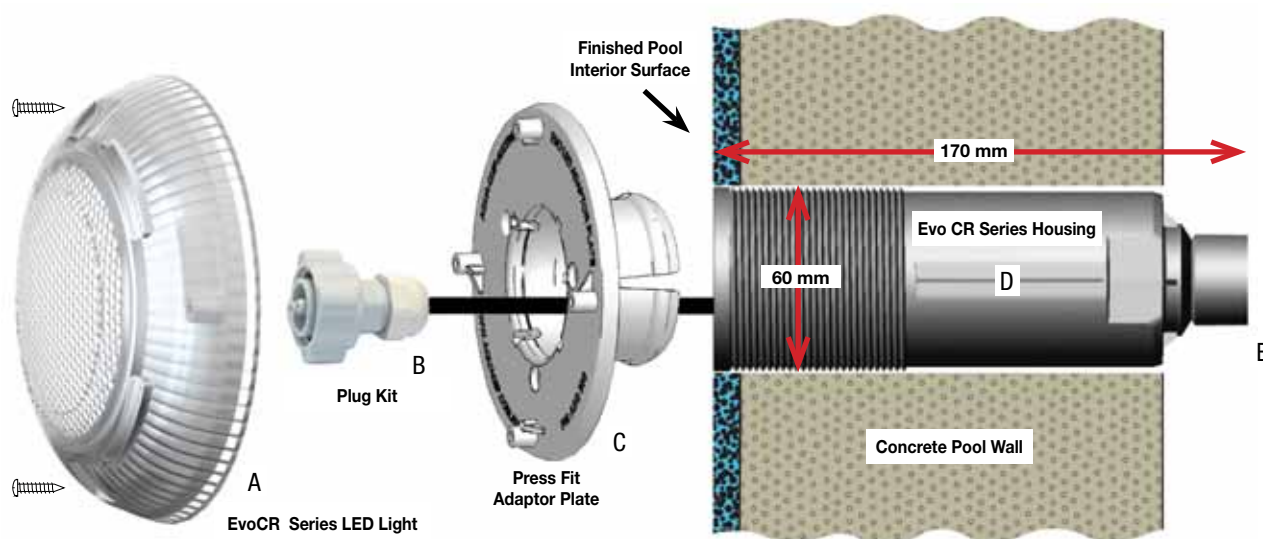

Protrusion from wall
29mm

Lens Diameter: 118mm

EvoCR Series LED Light Installation

- 1) Core drill to allow for fitment of the CR Housing (D), which has a diameter of 60mm.
 - 2) Use your preferred construction adhesive inside the core drilled hole.
 - 3) Insert CR Housing and Protective Cap (not shown) through the core drilled hole, ensure front of CR Housing is flush with the anticipated finished pool interior surface. Rear connection (E) accepts 20mm rigid PVC conduit. Conduit must run higher than pool water level.
 - 4) Allow sufficient time for adhesive to set. If applying a new pool interior, ensure it is flush with front of CR Housing.
 - 5) Glue the press-fit Evo Series Adaptor Plate (C) into the CR Housing. Its eyeball design allows angular and depth adjustment.
 - 6) Plug Kit (B) is factory-connected to the Supply Cable. Ensure a sufficient amount of cable is wrapped inside the CR Housing to allow for future servicing, maximum amount is 1 metre.
 - 7) Evo Series LED Pool Light (A) is connected to the Plug Kit, lubricate the 2 O-rings and hand tighten the connector nut.
 - 8) Evo Series LED Pool Light then mounts onto Adaptor Plate using two screws provided.
- Installation is now complete.
