Inbuilt clarifier

IQ NIL-PHOS PLUS.

WHY USE IQ NIL-PHOS PLUS?

Phosphates are a common food source for algae and are introduced to the water from things such as swimmers, dust and soil run-off from gardens and lawns. Nil-Phos Plus, is the only product available that has been formulated to use as both a regular maintenance treatment for preventive care or as a fix for when phosphate levels are high. Removes an incredible 1ppm to 6ppm of phosphates from the water.

WHAT IS NIL-PHOS PLUS AND HOW DO I USE IT?

Nil-Phos Plus acts by bringing phosphates together allowing them to be filtered out by your filtration system. It is formulated at optimum strength to ensure rapid removal of phosphates. It is simply added to the water or directly to the skimmer box.

Continue to run your pool filtration to remove the phosphate. Thanks to the inbuilt clarifier, you will also clear your water at the same time saving you time and money. Once the pool clears, we recommend you also run a quick backwash to ensure phosphates do not re-enter the pool.
